

The European Coordination Hub for Open Robotics Development

ASSESSTRONIC PROJECT

Isabelle Hupont (ISIR)

Jean-Louis Baudet (ACCEL)

Luxembourg / 14th February 2017

Background / motivation

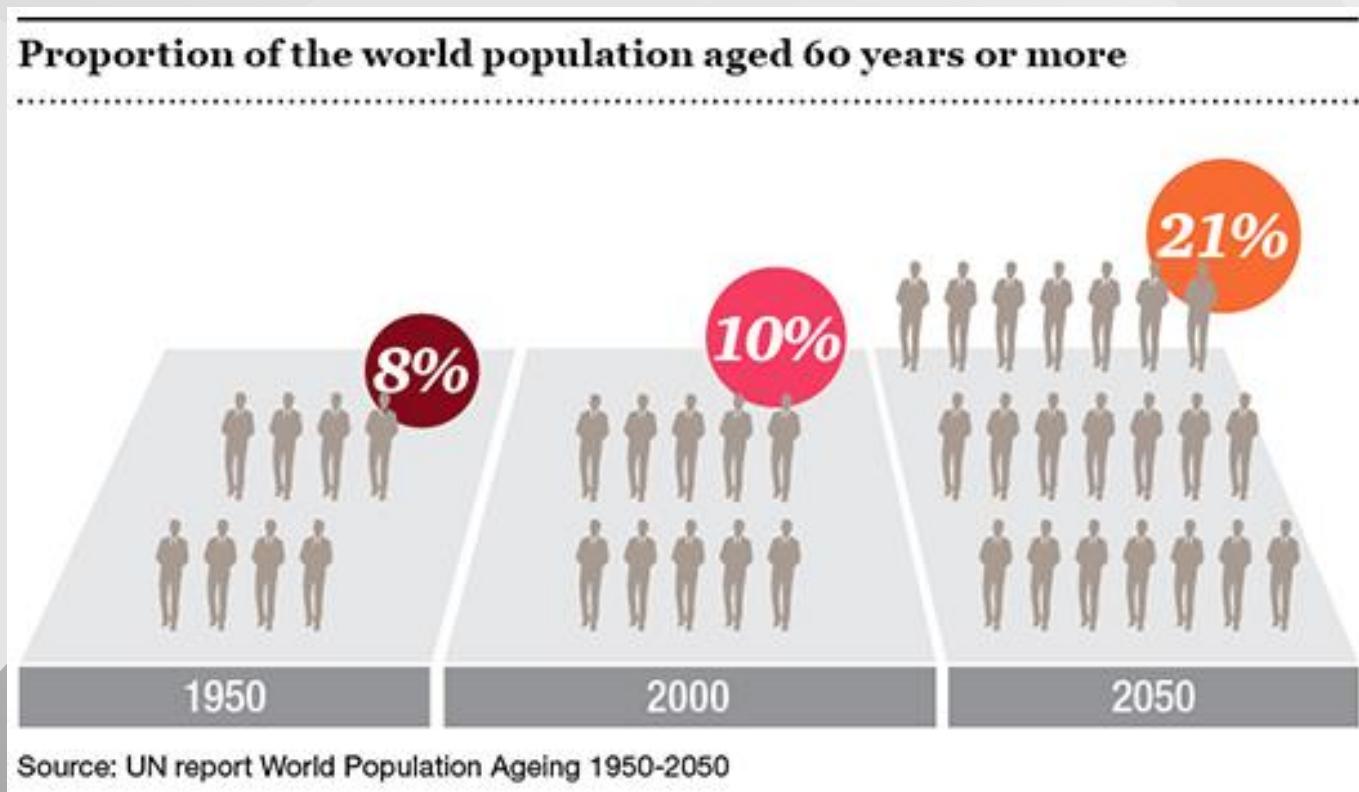

Today a CGA for one patient

- Costs around €200
- Takes around 2.5 hours
- Lack of **objectiveness** and accuracy

There is a strong need of

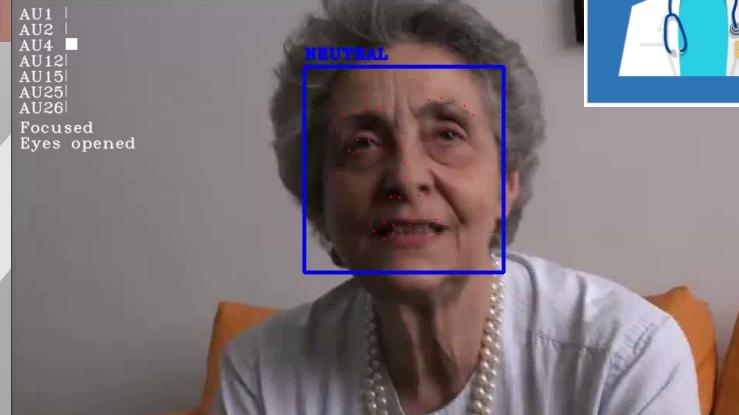

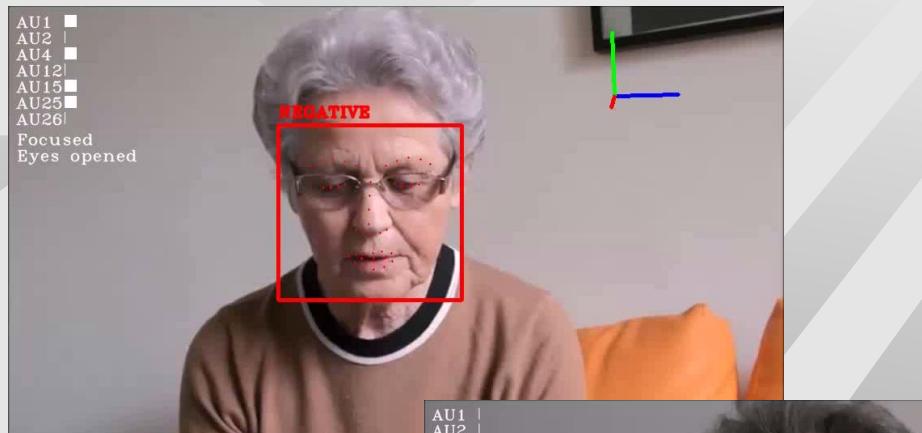

- Reducing the costs
- Optimize the resources
- Ensure objectiveness and accuracy

Technical progress

Questionnaire-based tests

- End-users centered design of the interfaces
- Facial orientation and expression recognition
- Use of virtual agents to improve the interaction

J'arrive à manger... 

Sans aide Avec une aide partielle Avec une aide totale

Cela signifie que vous pouvez vous servir de vos couverts, couper les aliments, porter les aliments et les boissons à la bouche et les avaler, sans aide d'aucune personne.

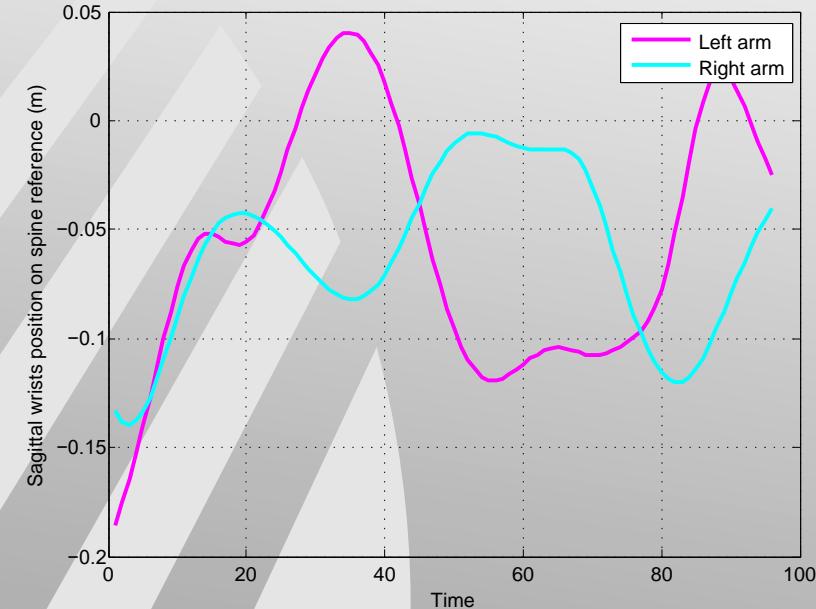

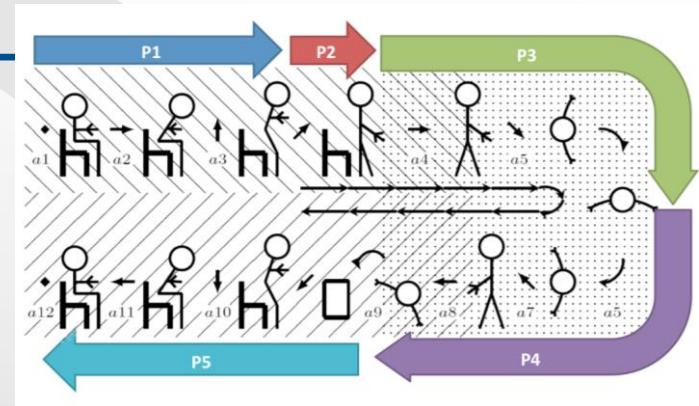

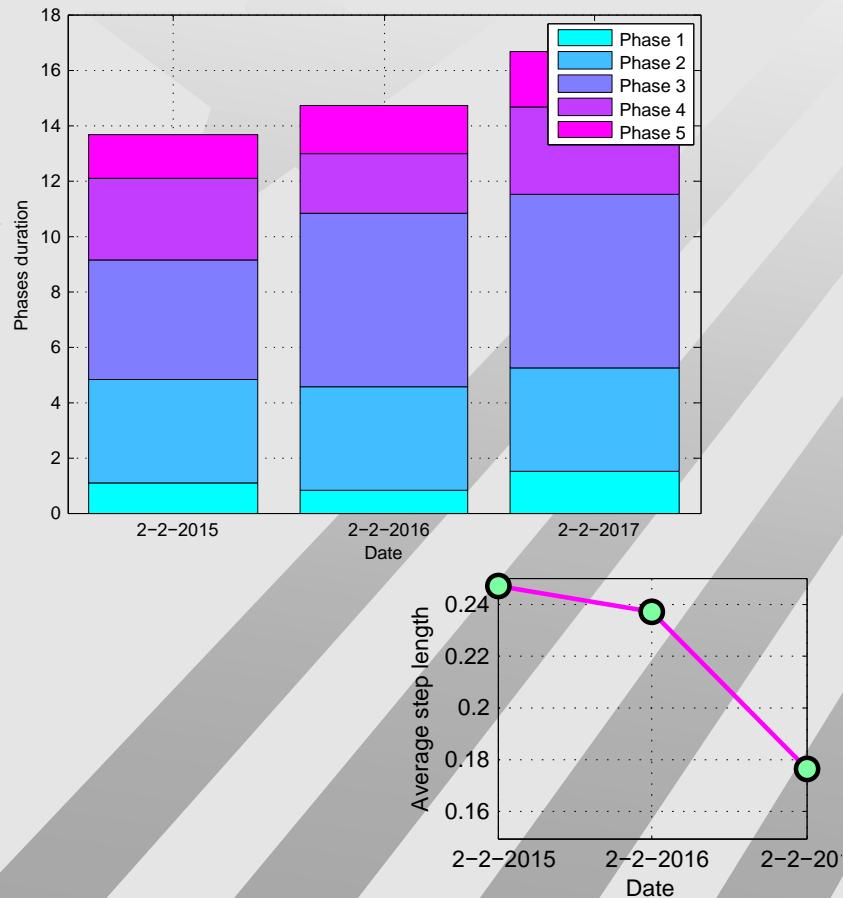

Dites «OUI» ou appuyez sur «question suivante» pour confirmer la réponse. Si non, dites «NON» et choisissez une autre réponse.

QUESTION SUIVANTE

Technical progress

Physical-based tests

- Patients' detection and tracking
- Analysis of spatio-temporal parameters

Demonstrator/ prototype

Modular solution exploiting three individual modules

Impact from participation in ECHORD++

The outcome of the ASSESSTRONIC project will have an impact on the geriatric community

- More efficient way of assessing fragile / dependent persons
- Growing ageing population with less resources
- Objective / quantitative data analysis
- Patients' history monitoring over time
- The product will be modular to address various markets

Thank you!
