

# ECHORD++

The European Coordination Hub for Open Robotics Development

---

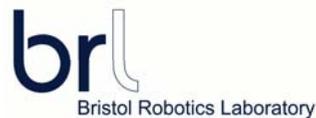

**DUAL ARM WORKER**

---

TECNALIA – LAAS -- AIRBUS

---

Urko Esnaola PhD, TECNALIA

## Brief Experiment Description

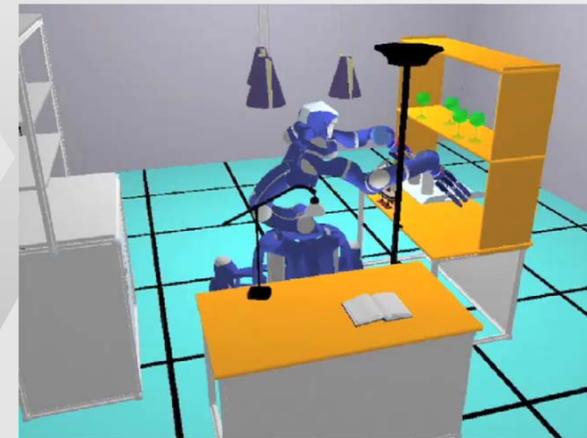

Solve the planning and execution of complex closed kinematics chain dual-arm motion

- Parts requiring two hands  
For size or weight
- Low accessibility and static/dynamic obstacles

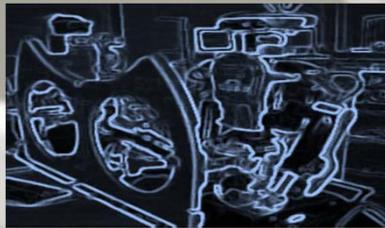

TECNALIA & AIRBUS

@ LAAS under EU Project PHRIENDS  
<http://www.phriends.eu/>

# Novelty/Objectives

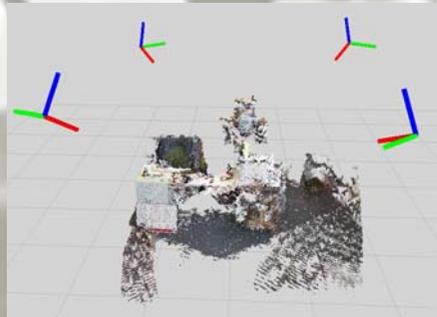

TRL3

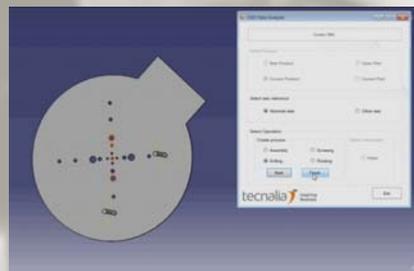

Dual-Arm + Torso Close Kinematics Planner module With Static and Non-Planned Obstacle Avoidance

Moveit Module

WorkSpace Monitoring for Obstacle Detection

Automatic Programming From CAD

Deploy into Real AIRBUS Aeronautics Pilot Station

TRL6

## Impact

### **Dual-Arm Robot Programming Framework**

Module Part of a Larger Dual-Arm Robot Programming Framework

### **More Safety and Reliability**

Perform Risky Operations for Health  
Non Ergonomic Operations

### **Job Creator for System Integrators**

Posible to Automate New Processes  
at Lower Cost

### **Low cost Manual Operation Automation with Interesting ROI**

### **Robotics Community Impact**

Create Open Source Dual-Arm  
Planning Module

### **Exportable to Other Sectors**

Interest from other AIRBUS plants  
Interest from several Automotive  
Companies  
Interest from other SMEs (ej. Mobile  
phone Antena Company)

Thank you  
for your Attention.

**AIRBUS**

**LAAS-CNRS**
